Abstract

The recent international things had a large impact on the aviation sector because of several reasons. This documentation is all about the user interface wireframe, here the home page of our flight fare prediction project is explained.

1. Web Interface

Our web page is one single interface where both input from the user and the prediction is displayed.

The wireframe shows a web interface titled "FLIGHT PRICE" on a blue background with an airplane. It contains the following input fields:

- Departure Date:** A text input with a placeholder "dd-mm-yyyy --:--" and a calendar icon.
- Arrival Date:** A text input with a placeholder "dd-mm-yyyy --:--" and a calendar icon.
- Source:** A dropdown menu with "Delhi" selected.
- Destination:** A dropdown menu with "Cochin" selected.
- Stopage:** A dropdown menu with "Non-Stop" selected.
- Which Airline you want to travel?:** A dropdown menu with "Jet Airways" selected.
- Submit:** A button at the bottom left.

2. User Input

Whenever the user hits our url, they first see the user input page here they have to provide the information like:

- Every user input has its own dropdown where the user can select their input.
- After providing the required input and pressing the submit button, the page refreshes and displays the output

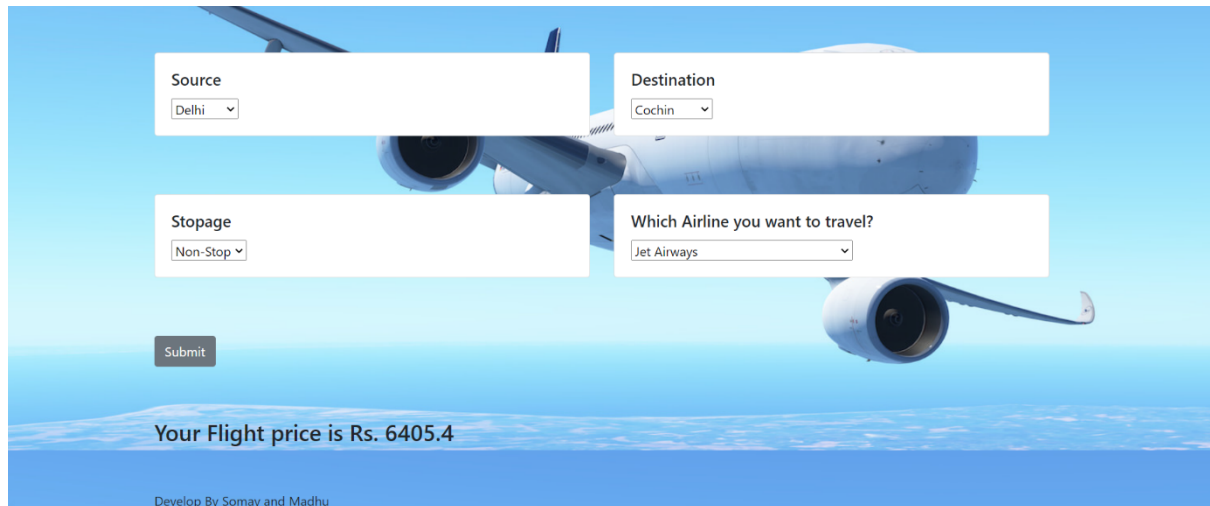

This wireframe shows the same interface as the previous one, but with specific user input values:

- Departure Date:** 25-01-2022 11:29
- Arrival Date:** 26-01-2022 11:30
- Source:** Delhi
- Destination:** Cochin
- Stopage:** Non-Stop
- Which Airline you want to travel?:** Jet Airways
- Submit:** The button remains at the bottom left.

3. Result Page

After the user hits the submit button the page gets refreshed and the results are being displayed in the highlighted area in the above frame.

The user can refill all the inputs in same page and get the results in the same way.
